

Estructura Tablas Sogo

La estructura de las tablas en SoGo es la siguiente:

```
-----
-- Fully-Unicode compliant SGO MySQL schema
--
-- Required MySQL version: >= 5.5.5
-- Required SGO version: >= 4.0.0
--
-- This schema includes some specific table creation
-- parameters needed for complete Unicode coverage
-- (required for emoji character support, for instance).
--
-- Note: SGO automatically creates those tables on start,
-- but *without* full Unicode compliance. So this schema
-- must be imported before SGO runs for the first time.
--
-- Strongly suggested MySQL configuration settings
-- (innodb* parameters are mandatory):
--
-- [client]
-- default-character-set          = utf8mb4
--
-- [mysql]
-- default-character-set          = utf8mb4
--
-- [mysqld]
-- character-set-client-handshake = FALSE
-- character-set-server           = utf8mb4
-- collation-server               = utf8mb4_unicode_ci
-- innodb_file_per_table          = TRUE
-- innodb_file_format              = barracuda
-- innodb_large_prefix            = TRUE
--
-- This schema assumes the SGO table names are configured
-- like the following; adjust if needed:
--
-- OCSAclURL                      -> sogo_acl
-- OCSCacheFolderURL              -> sogo_cache_folder
-- OCSEmailAlarmsFolderURL        -> sogo_alarms_folder
-- OCSFolderInfoURL               -> sogo_folder_info
-- OCSSessionsFolderURL           -> sogo_sessions_folder
-- OCSStoreURL                    -> sogo_store
-- SGOUserProfileURL               -> sogo_user_profile
--
-- SGO needs to know MySQL has full Unicode coverage;
-- the following needs to be put in sogo.conf:
--
```

```
-- MySQL4Encoding = "utf8mb4";
--
